Roadmap 2021-2026

At the crossroads of expertises, the National Library of France regards itself as a privileged observatory, as well as a demanding institution and a catalyst, regarding evolutions made possible by artificial intelligence. A 5-year perspective is presented by the BnF's roadmap, closely related to its current projects and achievements. Much more than the conclusion of a thorough investigation and study, this roadmap sets in motion a whole institution and its ecosystem bound to evolve in the coming years.

Actions

1

Making AI challenges and projects a part of the Institution's **global strategy**

2

Improving **R&D** organisation and implementation at the BnF

3

Developing **new skills**

4

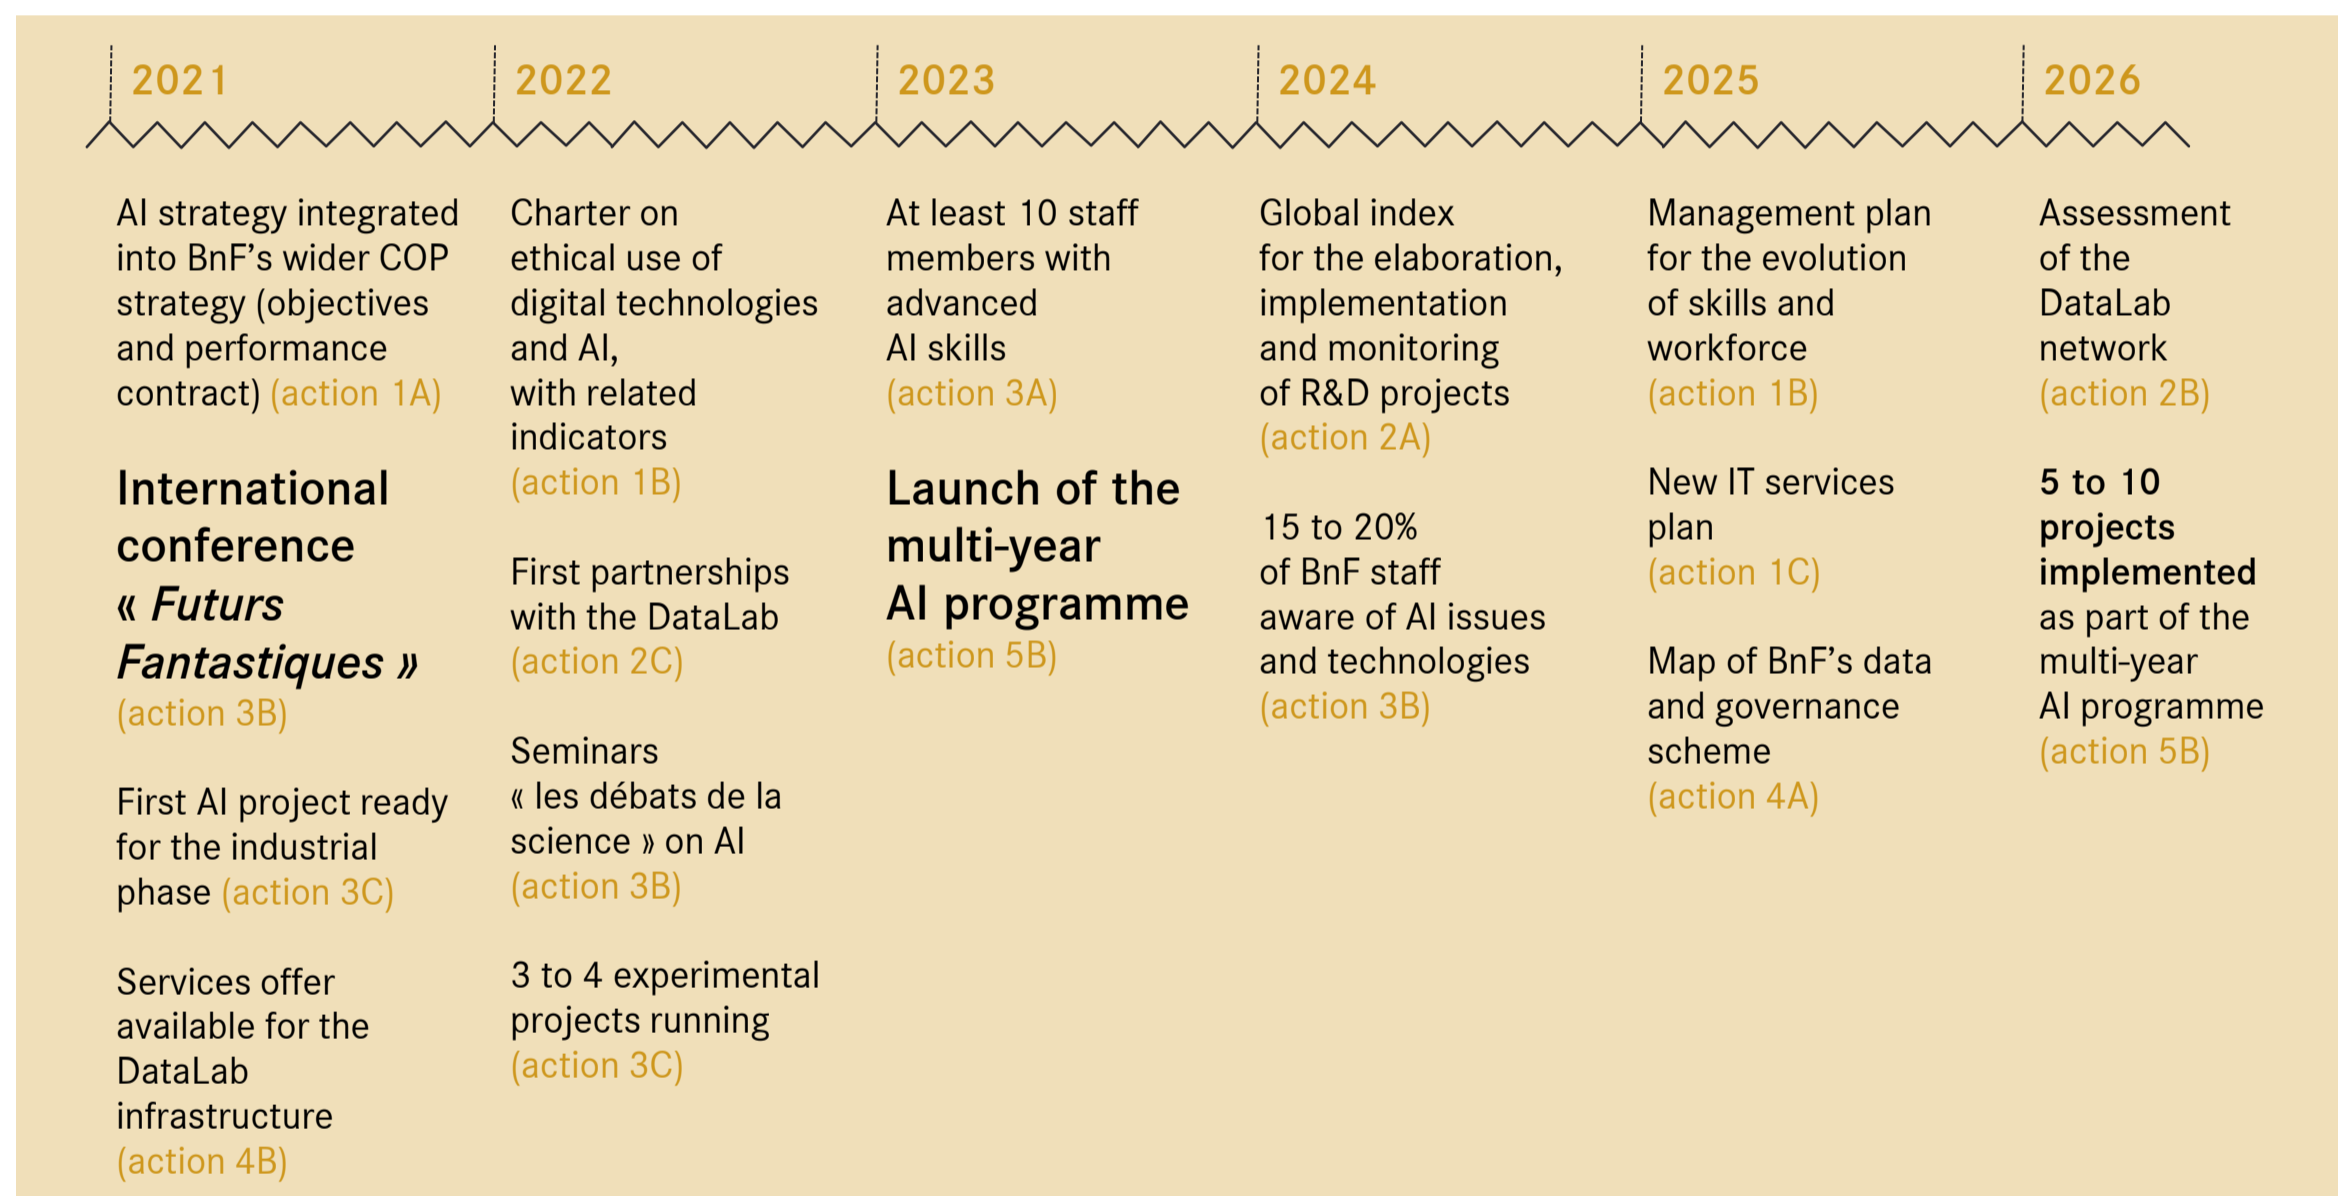

Adapting **infrastructure** and **data management**

5

Designing a **multi-year programme** with other stakeholders

Milestones

Projects from the multi-year programme

These projects fall under 5 fields:

1. Support to cataloguing activities
2. Collections management
3. Searching, analysing content and improving access to content
4. User engagement, putting content in perspective
5. Decision-making and governance
